

One Shot

Diesel Additives

... Protection and Performance For Every Season

100ml
Treats
100 L

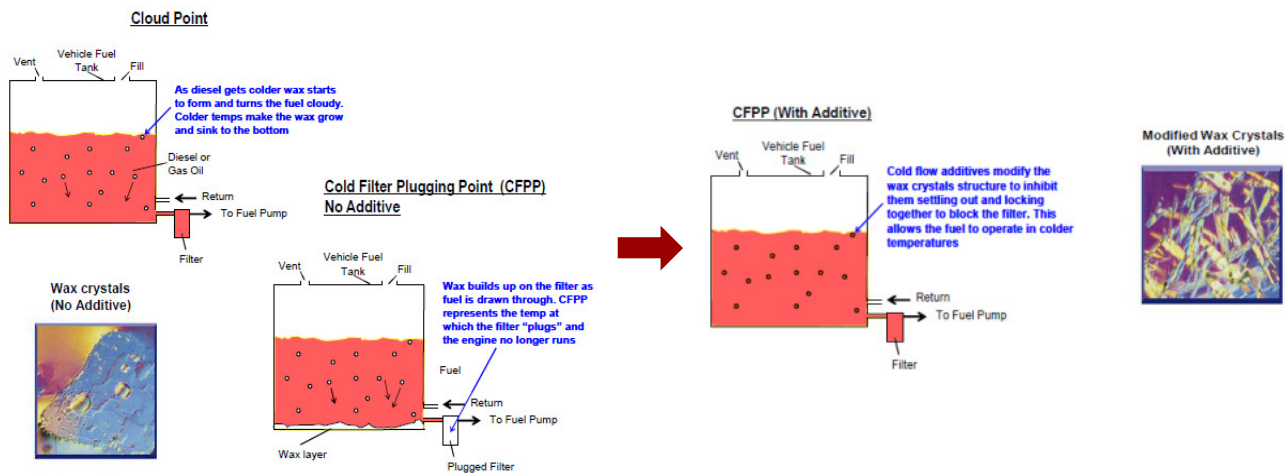

One Shot Diesel Anti-Wax

- ✓ boosts resistance to 'waxing'
- ✓ enhances diesel to operate at lower temperatures (-20°C)
- ✓ inhibits the formation of ice crystals
- ✓ reduces filter plugging

Why worry about freezing fuel as the temperature plunges?

As temperatures fall, diesel and Gasoil [red] turns cloudy and starts to form wax crystals. When the cold reaches -5 for prolonged periods of time, then the crystals grow and sink to the bottom of the tank. Eventually, the wax gets drawn through the supply lines and eventually begin to 'plug' the filters. This will prevent starting or even cause operational failure and therefore has potential safety implications.

OneShot Diesel Anti-Wax should be used as a preventative measure if prolonged cold spells are expected, adding it *before* the cold snap to ensure effective cold flow protection to all grades of diesel.

A 1 Litre bottle of **OneShot Diesel Anti-Wax** treats up to 1000 litres of fuel

Prevention and Protection with your last fill up before storage or winter usage - No Worries !
