

Plant Diesel Pro

www.siriusmarine.co.uk/oneshot

50ml
treats
150 Litres

- Improves fuel economy
- Enhanced power & starting
- Reduced emissions
- Smoother running
- Lower smoke & particulates
- Reduces sludge & fuel tank contamination

Why worry about using Red Diesel / Gas Oil in your tank?

Red Diesel / Gas Oil composition changed in 2011, reduced sulphur (natural biocide) and increased Biodiesel (7%) has led to a series of potential issues, for heavy plant owners, to occur in standing / stored diesel in the UK. When not using your plant regularly or storing for periods of time, untreated red diesel / gas oil in your fuel tank will degrade forming deposits, sludge can accumulate in the bottom of the tank and varnishes may form on the walls.

This is particularly a problem when fuel is stored for a prolonged time and/or is exposed to variations in temperatures. The results of this are the plant machinery having starting problems and not running smoothly or economically and potentially developing heavy contamination from increased water intake.

OneShot Plant Diesel Pro contains powerful antioxidants that inhibit the growth of fuel degradation products and reduce the potential for sludge build up in fuel tanks. Resulting varnishes and contamination can carry over into fuel pipes and engines resulting in blocked filters and poor combustion. The product also contains a cetane booster and lubricating agent which enhances combustion and improves lubrication of critical internal engine parts, leading to improved working life.

Available
in 50ml to 1L
bottle sizes

Contaminated Diesel

Heavy Bug Contamination

Acid Corrosion

OneShot Plant Diesel Pro should be added to the fuel tank prior to refuelling, ensuring maximum fuel economy in service with proven protection and performance.

A 1 Litre bottle of OneShot Plant Diesel Pro treats up to 3000 litres of fuel!
